NOTE: RUNNING ALL PARTS OF THIS SCRIPT IS RECOMMENDED FOR ALL MariaDB
      SERVERS IN PRODUCTION USE!  PLEASE READ EACH STEP CAREFULLY!

In order to log into MariaDB to secure it, we'll need the current
password for the root user. If you've just installed MariaDB, and
haven't set the root password yet, you should just press enter here.

Enter current password for root (enter for none):
OK, successfully used password, moving on...

Setting the root password or using the unix_socket ensures that nobody
can log into the MariaDB root user without the proper authorisation.

You already have your root account protected, so you can safely answer 'n'.

Switch to unix_socket authentication [Y/n] yes
```

6. Buat database dan pengguna database. Log masuk ke mariadb sebagai root:

```
fitri@fitrialfatiya:~$ sudo mysql

Server version: 10.6.12-MariaDB-0ubuntu0.22.04.1 Ubuntu 22.04

Type 'help;' or '\h' for help. Type '\c' to clear the current input statement.
